

Replica Orange Vinyl

Painted leathergrain vinyl

Nominal thickness = 0.42mm

Note that typical guitar amp Tolex
is 0.65mm to 0.70mm

United Kingdom Rexine

from Continental II lid

Nominal thickness = 0.28mm

Protected inside shown

has retained most of original
colour but has dulled with age.

This painted vinyl has been made to restore UK Continentals finished in a leather grain Rexine. The colour match is based on the clean inside lid colour and is an estimate of the original unfaded colour level. It has been professionally colour matched as a compromise between daylight and artificial lighting. The thickness of the vinyl is between the UK specification and the Italian specification.

This is not a commercial product. The material available is the remainder of the material prepared for my restoration needs and is sold at cost on a 'no return' basis. It is available in pieces 500mm x 1390mm.

Replica Orange Vinyl

Painted leathergrain vinyl

Nominal thickness = 0.42mm

Comparison with available guitar
amp vinyls (0.65 to 0.70mm)

Note:

Gloss level can be modified by gentle
abrasion using a Scotch Brite scourer.
Use a soft, well worn pad with water.
Wipe vinyl clean with a wet sponge.
